

Population.

- Population: No. of people in a particular area at a given time.
- Census: It is official & process in which population is counted.
- India: Last census → 2011.
- Population of the world → 8.3 billion.
- Population of India → 1.48 billion (Most populated country in the World).
- ⇒ Population size and distribution in India:
 - According to Census 2011.
 - Population of India → 1210.6 million (1.2 billion)
↓
Accounts for 17.5% of the population.
- ⇒ Area of India → 3.28 km^2 → 2.4% of the world's area.
- ⇒ State → Most population state → U.P → 198 million
- 16% of the country's pop.

- Least populated state → Sikkim → 0.6 million (6 lakhs)
- U.T → Delhi is the most populated U.T.
- Lakshadweep → Least populated U.T → (64, 429).
- Almost half of India population is present in only 5 states → U.P, Maharashtra, Bihar, W-Bengal and Andhra Pradesh.
- Rajasthan → largest state in area.
↓
Only 5.5% of the India's pop. is present here.
- ⇒ Population density in India:-
 - Pop. density: Refers to the total population per unit area.
- ⇒
$$\text{Pop. density} = \frac{\text{Total population}}{\text{Total area.}}$$
- ⇒ India is among the most densely populated

country but still Bangladesh and Japan are more dense than India.

→ ~~Pop~~ Pop. density of India → 382 person per km^2 .

• Density will vary from state to state.

- Bihar - Pop. density → 1102 person per km^2 .

Arunachal Pradesh → Pop. density → 17 personⁿ per km^2

⇒ In India, there are states which are having less dense population (Less than 250 person/ km^2).

e.g. J&K, Sikkim, Aru. Pradesh, Uttarakhand, etc.

⇒ Why? ① Rugged terrain. ② Unfavourable climatic condition.

⇒ states in India → Moderately dense → (250-500 person/ km^2)

e.g. Assam and Peninsular states (Maharashtra, A.P., Odisha)

→ Why? ① Moderate rainfall. ② Less fertile soil.

- High/Extremely dense populated state:

• More than 500 persons/km²

e.g. Northern plains (Punjab, Haryana), Bihar, W. Bengal, Kerala.

- Reasons Flat land with fertile soil.

- Abundant rainfall.

→ Population Growth

• Change in the no. of people of a country over a period of time.

→ Generally expressed as increase in population.

→ Population change: It is the population over a period of time.

• It can be increase as well as decrease

in population.

→ Population change is expressed in following terms:-

1) Absolute numbers:-

• It shows the magnitude of increase in population each year or each decade.

⇒ • It is obtained by simply subtracting the early population from the later population.

2) Annual Growth rate:-

• It is the percentage by which population changes over a period of time.

e.g Village → 2010 (Pop) = 10000
2011 (Pop) = 10,200

$$\text{Annual growth rate} = \frac{2000 \times 100}{10000} = 2\%$$

- From 1951 to 1981 the annual growth rate of India was steadily increasing.
- Since 1981, the annual growth rate started declining because the birth rate also started declining due to awareness of family planning.
- The declining trend of growth rate is a positive indicator of the efforts of population control by the Government.

⇒ Component/Factors of Pop. Growth

- 1) Birth rate.
- 2) Death rate.
- 3) Migration.

1) Birth rate: Also c/a natality rate.

- The number of live births per 1000 people per ~~the~~ year.
- ~~Birth~~ Birth $>$ Death rate $\rightarrow$ Pop. grows.

2) Death rate: Also c/a mortality rate.

- The number of deaths per 1000 individual per year.
- Death rate $>$ Birth rate $\rightarrow$ Pop. declines.

3) Migration: It is movement of people across region and territories.

- It can be:- (1) Internal migration:-
(2)

$\Rightarrow$ 1) Internal Migration:

- Occurs within the country.
- Movement of people from state to state.

$\rightarrow$ It won't change the population of the country, but it will change the distribution of pop. within the country.

→ People will move from rural area because of push factor (Unemployment, poverty) to urban areas because of pull factor (Employment, better standard of living).

2) International Migration: occurs between the countries.

- People will move from one country to another.

Moving in → Pop. increases
Moving out → Pop. decreases.

- Immigration and Emigration
↓ ↓
Act of coming to a country. Act of leaving the country.

- Thus, migration is an important determinant of

pop. change. It plays a significant role in changing the number, composition and distribution of population.

⇒ Adolescent population:- 10-19 yrs of age.

- It is the most significance feature of Indian population.
- It comprises of $\frac{1}{5^{\text{th}}}$ of population of India.
- It is important resource for future.
- Nutritional requirements are important part of this age, poor nutrition can lead to deficiencies and stunted growth.
- ~~At~~ In girls, anemia is seen.
- Proper diet, Awareness, literacy and education

among them is important.

⇒ National Population Policy (NPP, 2000)

- This policy was framed by govt. of India to promote responsible and planned parenthood.

- Objectives

- 1) To impart free and compulsory education upto 14 yrs.
- 2) Reduce infant mortality rate to below 30/1000 live birth.
- 3) Achieving universal immunization of children against all vaccine preventable diseases.
- 4) Making family welfare a people centered programme.

Geography of J&k and Ladakh

- The UT of J&k and Ladakh covers the northern part of India. It is surrounded by China in the east, Afghanistan in the North and Pakistan in the West.
- The states of Punjab and H.P form the southern boundary of U.T.

⇒ Physiography: 3 distinct regions.

- 1) Jammu.
- 2) Kashmir.
- 3) Ladakh.

- Every region has different physical features.

- Division: 1) Outer Plain.

- 2) The Shivaliks
- 3) The Middle Himalayas
- 4) The Valley of Kashmir.
- 5) The Ladakh region.

1) The Outer Plains: It is the southern part of U.T.

- Covered by alluvial soil, deposited by Chenab, Ravi and Tawi and their tributaries.
- Extension of Great Indian plain.
- stretches from river Ravi to River Chenab for a distance of 110 km.
- Locally c/a Andermal or Bajmal.
- They are cut by deep and shallow ravines.
are also called as khad.
- During rainy season, khad transfer into mullahs.
- Fertile and Productive regions of outer plain (Jammu).
- Consists of Kathua, R.S. Pura, Akhnour,

Hiranagar, Bishwah Damans, etc.

→ Some parts of Jammu city like Talab Tills, Gandhi Nagar and Satwari.

→ Elevation of outer plain - 330-360m ~~Asc.~~ Above sea level.

2) The Shiwalik:

- Lie towards the north of outer plains.
- 20-50km. Wide.
- 600-1220m. Above sea level.
- Longitudinal valleys called as 'duns' are present here. → Include Basohli, Ramkote, Darsal, Vdhampur and Sunderbani.

3) The Middle Himalayas:

- The range present in J&K is called as Pir Panjal (Longest/largest range)

Range.

- Elevation: 1800 - 3600 m.

~~3) The Middle Himalaya~~

→ characterised by deep-cut valleys.

→ Are c/a 'Pahar' in Jammu division.

→ Present between Ravi river in east and Poonch in west.

→ Width: 10-60 km.

→ Sacred cave of Mata Vaishno Devi is present here → On Trikuta Mountains.

→ J&K ~~and~~ National Highway have been carved out through middle Himalayas.

→ Patnitop present here → 1950 m.

4) The Valley of Kashmir:-

- surrounded by Greater Himalayas in the north and Middle Himalayas in the south.

- Width:- 40-60 km.

- Length:- 130-140 km.

⇒ Elevation:- 1500-1800 m.

⇒ Further divided into 3 divisions:-

1) Valley Floor.

2) Karewas.

3) The side Valleys.

1) The Valley Floor

• Comprises of flood plains of Jhelum river from Khanabal to Baramulla.

• Fertile agriculture tract and is considered

as food bowl of valley.

2) The Karewas:- Zone of upland

- Flat topped terrace like land on both sides of flood plain.
- Also c/a Wuddor in Kashmir.
- Imp. for Saffron, almond cultivation.

3) The Side Valleys:- Smaller valleys that are branch off from main valley.

- Imp. tourists destinations and livestock rearing.

e.g. Sindh Valley, ~~Lad~~ L. Lad Valley, Lidder Valley, Kishanganga Valley.

5) The Ladakh Region:-

- Northern most region of India.
 - Arid table like land and located at an elevation of 5000m.
 - It is a cold desert, Vegetation is scanty.
 - ~~India~~ Indus river flows here, along which vegetation can be grown like barley, vegetables, apricot.
 - Glacier of Siachen is present in Karakoram Range.
 - Ladakh comprises of following ranges and regions.
- ### 1) The Zaskar Range:-
- Lies in southern side of Sindh Valley.

- Drained by Zaskar river.
- ~~From~~ Drass → The second coldest place in world lies here.

2) The Ladakh range

- Between Indus river and Shyok river.
- Forms an important range of Trans-Himalayas.
- Stretches from Indus to Pangong lake.

3) The Karakoram Range

- Extends from river Hunza to River Shyok.
- Abs c/a shining crest of earth.

4) The Akeai - Chin Region

- Lies in N-E part of Ladakh.
- Present east of Shyok River.

- Also c/a Lintze Tang Plain.

5) → Gilgit and Baltistan:

- Situated in trans-Himalayan Region.
- Prominent Ranges are present here → Western Himalayas, Pamir mountains and Hindukush.
- Second highest mountain peak → K2 or Mt. Godwin.
↓
As Austen.
8610m.

⇒ Imp. Glaciers - Biafo, Balhura and Batura.

⇒ Climate of J&K, Ladakh:

• It has been divided into 3 divisions:

- 1) Sub-tropical Jammu
- 2) Temperate Kashmir.
- 3) Arctic Ladakh.

1) Sub-Tropical Jammu

- Highlands of Jammu → Baderwah, Poonch.

- Parts of Rajuri, Bani and Basohli.

↓

Temperate type of Climate.

(Warm to mild Summers
(Cool to ~~cold~~ cold Winters)

- Some other parts of Jammu → Present near Punjab Plain.

↓

Sub-tropical climate

2) Temperate Kashmir:-

- It will have temperate climate.

- Mild Summers, July and August → have ~~oppression~~
heat.

- Severe and cold winter with snow.
 - Receive winter rainfall and summer remains dry as no monsoon.
 - Pleasant spring.
- 3) Arctic Ladakh: It will have cold and dry climate.
- Summers are short but oppressive.
 - Winters are cold and extremely severe and long.
 - Little rainfall, mainly snowfall occurs.

⇒ Drainage system of J&K, Ladakh:

- Kashmir: Jhelum river and Kishanganga river.
- Tributaries: Romushi, Doodh Ganga, Sukhnag,

Lidder, Sindh Nallah, Madhumoti and Phuru.

⇒ Jamuna River, Chenab, Ravi, Taxila and their Tributaries.

- River Chenab → 2 main streams →
 - The Chanda.
 - The Bhaga.

originate in Ladakh
spiti (H.P.)

- And enters J&K in Paddar area of Kishtwar.

⇒ Ladakh Drained by Indus river and its tributaries.

- Eastern Ladakh: Zaskar, Shyok and Suru rivers.
- Gilgit-Baltistan: Gilgit, Hunza, Gomal rivers.

⇒ Soils: The top most layer of the earth's crust composed of weathered rock material and

organic content. which supports the plant life is termed as soil. Owing to the varied geo environmental and climatic conditions the U.T of J&k and Ladakh are blessed with varied soil group.

• Major soil groups are:-

1) Alluvial Soil.

2) Karewas Soil.

1)⇒ Alluvial Soil: The Jammu plains are predominantly ~~covered~~ covered with ~~alluv~~ alluvial soil.

• In Jammu region the alluvial soils have two variants:-

- i) Old alluvium (Bhangar): lie above the banks of the river and are generally free from floods.
- ii) New alluvium (khaddar): are frequently inundated as they lie in the flood plains of rivers.

2) Karewas Soil:

- Karewas are lacustrine ~~deposits~~ deposits found as low flat mounds or elevated plateaus in the valley of Kashmir and Kishtwar and Baderwah tracts of Jammu Division.
- Due to the ~~high~~ presence of proper irrigation

facilities, this soil is highly productive for horticulture crops especially apple, almond and saffron.

- ⇒ • Ladakh region being a cold desert, lacks well developed soil profile.
- However, some alluvial tracks are found on the banks of Sindh river and its tributaries.
- ⇒ Mountainous soil are predominantly seen in various areas of Ladakh region.
