

⇒ Topic:- Prevention of drug Abuse and Sexually Transmitted disease.

→ Adolescence:- Adolescence is the group of
Girls = 8-18 yrs
Boys = 7-19 yrs.

- Adolescence extends from puberty upto complete sexual maturity.

⇒ Puberty:- A phase when a child's body is changing and becomes physically like that of an adult.

⇒ This phase is characterised by:-

- Accelerated physical growth.
- Development of reproduction organs.
- Change in neuroendocrine system.

⇒ Issues associated with adolescence:-

- Acne.
- Hypochondria (fear of illness).
- Loneliness.
- Craziness for different things.
- Psychological aberrations.
- Neurasthenia (Chronic physical and mental fatigue).
- Phobia.
- Post-traumatic stress syndrome.
- Eating disorder.
- ~~So~~ Suicidal behaviour.

⇒ Why? - Peak age group for risk exposure.

⇒ Drug:-

- Any natural or synthetic compound that changes chemical processes/processes of body.

Drugs treat illness, relieve symptom, enhance performance, changes state of mind.

⇒ Etymology: This word is derived from dutch word "droog", which means dry since major drugs in past were dried plant parts.

⇒ Drug abuse: A harmful pattern of use of drug in terms of quantity/manner, other than prescribed.

⇒ Drug addiction: A state of Physical and Psychological dependence of drug, and is characterized by regular, habitual and compulsive drug craving.

⇒ Effects on Brain:

- Psycho active drugs effect CNS (central nervous system).

- ~~They~~ They Impact nerve cells by effecting

• the release of neurotransmitters.

⇒ Characteristics of Addiction

- An overpowering desire, to take drug and obtain it by mean.
- To increase drug dose.
- Psycho and physical dependence on the effect of drug.
- Determental effects on individual and society.

→ Drug:-

- Alcohol
- Tobacco.
- Opioids
- Cannabinoids.
- Cocaine or Coca alkaloids.

→ Alch Alcohol:- It is a simple organic compound

- It doesn't need digestion.
- It has very fast absorption rate in stomach and is transported to cells.
- When it oxidizes it generates large amount of heat.
- It has anesthetic property, and sedative property.
 - ↳ Inactivates sense.
 - ↓
Induces drowsiness and sleep.
- It impacts liver.

2) ⇒ Tobacco:

- Tobacco is obtained from dried and cured leaves of Nicotiana glauca, Nicotiana glauca, and Nicotiana glauca.

- It contains highly toxic alkaloid, known as nicotine.

→ Chemicals:

- Carbon monoxide
- N-nitrosodimethyne
- Poly-cyclic hydrocarbon, like benzo(a)pyrene and Tar.

⇒ Causes:

- Release of Adrenaline (hormone).
- Constriction of blood vessel.
- ↑ Increase in heart rate, blood pressure, Cardiac output.

⇒ Larger = Cancer.

= Irritation

= Inflammation of mucosa of throat and bronchi.

= Emphysema. (Increased secretion of Gastric ~~juices~~ juices).

3) ⇒ Opioids:-

- These are the drugs which bind to the receptors present on CNS and gastrointestinal tract.
- These are obtained from the ~~plant~~ latex of plant = Papaver Somniferum = Poppy.
- In J&K they are cultivated in South Kashmir.
- In recent development it has been found to affect the male reproductive capacity.

4) ⇒ Cannabinoids:-

- These group of chemicals ^{drugs} ~~is~~ ^{do} ~~react~~ ^{interact} with & interact with cannabinoid receptors.
- Obtained from plant cannabis sativa.
- e.g. Chasas, Ghonja, H Hashish.

5) Coca Alkaloids or Cocaine:-

- It is obtained from plant Erythroxylum
Coca.

e.g. Cocaine.

⇒ Therapeutic treatment for addiction:-

- Drugs used for detoxification = diazepam.
- Treatment = Pentobarbital.
= Naloxone.
= Methadone.

★ ⇒ Types of drugs:-

1). Sedatives and Tranquallizers.

↓
Induce Calmness.

2). Stimulants - They activate CNS
e.g. - Nicotine.
Coffiene.
Cocaine.

⇒ Medicine: While medicine is a specific, regulated

Page No. _____
Date ____/____/____

substance, used to treat, cure, prevent disease.

★ → Sexually Transmitted Diseases:- (STD)

- The diseases are the infections, which transfer from an infected Individual to other individual through a sexual contact.
- They are also known as Venereal diseases.
- Also called as Reproductive tract Infection (RTI).
- These may also occur by bacteria virus.

e.g. AIDS.

Gonorrhea.

Syphilis

Hepatitis - B.

*⇒ AIDS:-

-- Expanded from = Acquired Immune deficiency Syndrome.

↳ Illness Symptom.

⇒ Causal Agent:- → HIV → It is a Virus.

↓
Human Immune deficiency
Virus.

⇒ Target:- It attacks and destroys white blood cells, specifically [T-Cell], these cells are responsible to fight against Infection.

⇒ Mechanism:- This virus damages immune system severely that it no longer can fight minor infections.

→ First case of AIDS in India - 1986.

- First case of AIDS in U.S = 1981.

- Mode of Transmission

- Unprotected sexual contact.
- Transfusion of infected blood.
- Using contaminated needles and syringes.

~~* Mode of Transmission~~

- Can also transfer from mother to child, during pregnancy.

Note:- AIDS does not transfer through casual contact

like:- hand shaking

- Hugging.
- Sharing food.
- Coughing
- Sneezing
- Mosquitoes bites.

→ Symptoms:- Early Symptoms:-

- Mild to high fever and chills.
- Persistent headaches and body aches.
- Swollen lymph nodes.
- Sore throat.
- Skin rashes.

→ Later Symptoms:-

- As the virus progressively damages Immune system, symptoms grow severe.
- Rapid and explained weight loss.
- Chronic diarrhea.
- Recurrent high fever and severe night sweats.
- Extreme and prolonged fatigue.

- Frequent minor infection, grow into severe infection. $\rightarrow$ Severe cough, ~~pe~~ pneumonia and Tuberculosis.
- White spots or lesion on mouth and throat.
(Fungal Infection).

$\Rightarrow$ Tests used to detect AIDS:

- ELISA = Enzyme linked Immunosorbent assay.
- Western blot test.
- Viral antigen detection test.

$\Rightarrow$ Prevention and control:

- Screening like blood before transfusion.
- Using disposable needles and syringes in hospital and clinics.

- Practicing safe sexual contact.
- Educating people = disease
= Avoiding sharing of personal
core items like razor.
- 75% chance of disease transmission ^{through} ~~and~~
sexual contact.
- 90% chance of disease transmission through
blood transfusion.
- 20-40% chance of disease transmission from
mother to child.
